

# abstract

myCar is a collection of different software products with own development work added. In the following overview, not all components are listed, but the main ones which are explicitly configured.

## Component overview

### Armbian

Armbian is the OS for this project. Additional software has to be installed to work properly.

<https://www.armbian.com/orange-pi-zero/>

### Install required components

### obdgpslogger

### hostapd

### rfcomm

### gpsd

### flask

Flask is the python application server used for providing the web interface and the API to controll the myCar unit. Documentation for Flask could be found under <http://flask.pocoo.org/docs/1.0/>.
