

abstract

myCar is a collection of different software products with own development work added. In the following overview, not all components are listed, but the main ones which are explicitly configured.

Component overview

Armbian

Armbian is the OS for this project. Additional software has to be installed to work properly.

<https://www.armbian.com/orange-pi-zero/>

Install required components

obdgpslogger

hostapd

rfcomm

gpsd

flask

Flask is the python application server used for providing the web interface and the API to controll the myCar unit. Documentation for Flask could be found under <http://flask.pocoo.org/docs/1.0/>.
