

abstract

The obdgpslogger uses a sqlite database to store its recorded data. The schema is quite undocumented. I try to do this here on my own.

schema

<i>trip</i>	[table]
<i>tripid</i>	INTEGER
"start"	REAL
"end"	REAL

<i>obd</i>	[table]
load_pct	REAL
temp	REAL
rpm	REAL
vss	REAL
iat	REAL
maf	REAL
throttlepos	REAL
"time"	REAL

<i>gps</i>	[table]
lat	REAL
lon	REAL
alt	REAL
"time"	REAL

obdgpslogger sqlite schema
