

# abstract

The obdgpslogger uses a sqlite database to store its recorded data. The schema is quite undocumented. I try to do this here on my own.

## schema

<b><i>trip</i></b>	[table]
<b><i>tripid</i></b>	INTEGER
"start"	REAL
"end"	REAL

<b><i>obd</i></b>	[table]
load_pct	REAL
temp	REAL
rpm	REAL
vss	REAL
iat	REAL
maf	REAL
throttlepos	REAL
"time"	REAL

<b><i>gps</i></b>	[table]
lat	REAL
lon	REAL
alt	REAL
"time"	REAL

***obdgpslogger sqlite schema***  
generated by SchemaCrawler 15.04.01  
generated on 2019-03-07 09:50:02

As you can see here, there are no direct connections between the tables. Its quite flat. Therfor the logi is in the application (somehow).

# Tables

**trip**

**obd**

**gps**
