

# Intro

This wiki page collects some of my efforts in SailfishOS development.

## App Projects

- [W3W - What.three.words](#)
- [IMDb \(unofficial\)](#)
- [OnVista \(unofficial\)](#)
- [TVSpielfilm \(unofficial\)](#)
- [golem.de \(unofficial\)](#)

## Tools Projects

- [Sailfish Contacts Rescue](#)

## support tools

```
$ ./CreateSailIcons.sh
./CreateSailIcons.sh <-i ICON-file> [-o OUT-file]
This tool creates the required Icons from one master file.
-i IN-file      Please provide an valid iconfile (PNG, X>=172,
Y>=172)

                Icons will be created in their subdirectory.
                Sizes
                    172x172
                    128x128
                    108x108
                    86x86
                Destination directory of ouput is
/home/devnull/ed/Programme/entwurf/SailfishOS

-o OUT-file      output file name
                  ! Do not specify a path here, only a file name !

Version 1.0, Report bugs to sailfish@siningsoft.de
